Todo List

1. high

- **[code]** Need some sort of ansynchronous mechanism to wrap the #doEvent methods. # MWM
- **[code]** Need to give some thought to some architectural issues. It's apparent that there will be common code between the two general types of Mediators (Transaction and TransactionReport) -- each of the mediation targets (SNMP, logging, etc.) will be similar. Need to find a way to encapsulate and reuse common code here - some sort of Strategy pattern is what I'm thinking of. # MWM
- **[code]** Develop an AndroMDA cartridge for instrumenting a generated app # MWM
- **[code]** Develop an AspectJ package that can be used to instrument an app # MWM
- **[code]** Develop JMX Notifications TransportMediator # MWM
- **[code]** Develop Database/Datastore TransportMediator # NR
- **[code]** Develop a summarizing Logging TransportMediator # MWM
- **[code]** Complete the ARM implementation (Transaction reports, metrics) # MWM
- **[code]** Develop sample applications (J2EE, simple servlet, Swing client, Spring, AOP, AndroMDA) # MWM
- **[docs]** Improve the docs/Web site # MWM
